

IMPROVE SITUATIONAL AWARENESS

& MAKE SAFER, MORE INFORMED DECISIONS

KNOW WHAT YOU'RE DEALING WITH

More than 30% of all firefighter line of duty injuries were caused by*:

- Lack of situational awareness
- Human error
- Poor decision-making

One of the best ways to mitigate risk is to improve situational awareness.

* Contributing Factors to Firefighter Line-of-Duty Injury, 2008.

FIRST RESPONDERS MUST BE CONSTANTLY ON ALERT

Uniformed decisions can lead to serious consequences.

PROBLEM HEARING PROTECTORS ISOLATE

Isolation from comms and outside sound can lead to dangerous incidents for crew members.

SOLUTION LISTEN-THROUGH TECHNOLOGY

Push-button control of outside sound lets you mix in just what you need to hear to improve awareness, without isolating you from command, your crew or dispatch.

PROBLEM DIRECTIONAL AWARENESS

Inability to clearly identify where sounds come from slows decision making.

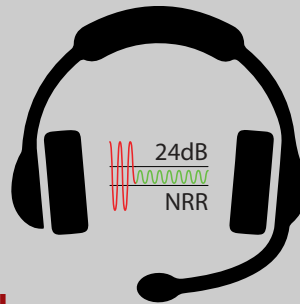

SOLUTION STEREO MICROPHONES

Stereo separation helps you perceive whether a sound is coming from the front, behind, or to the side so you can address problems head on.

PROBLEM IMPULSE NOISE

Sudden loud noises can create disruption, dangerous distractions, and hearing damage.

SOLUTION HEARING PROTECTION

When Listen-Through is active, sudden loud noises like explosions do not transmit to the user. Speakers shut down briefly, followed by a gradual return to the previous volume setting.

ACHIEVE OPTIMAL SITUATIONAL AWARENESS

Firecom's Listen-Through Technology enables first responders to maintain clear voice communication, adjustable situational awareness, and advanced hearing protection.
